PROFESSIONAL SUMMARY

Android Software Engineer who builds reliable, high-performance native Android applications using Kotlin, Java, Android SDK, and maintainable architecture. Owned technical design, feature delivery, code reviews, and production releases for mobile products serving 700K+ combined users. Brings hands-on experience in Android platform integration, offline-first data, authentication, accessibility, and production debugging to deliver stable applications across evolving devices and OS versions.

TECHNICAL SKILLS

Kotlin · Java & Android SDK · MVVM / Clean Architecture · Jetpack Compose & XML · Coroutines & WorkManager · Android UI & Accessibility · Gradle / CI/CD / Releases · Firebase & Crashlytics

PROFESSIONAL EXPERIENCE

Transaction Network Services (TNS)

Android Engineer | Remote | June 2021 – August 2026

- Owned Android technical design, feature implementation, code reviews, and Google Play production releases for USCC Call Guardian and Xfinity Call Guard, coordinating with Product, QA, and backend teams.
  → Supported the delivery and continued operation of two mobile applications serving 700K+ combined users.
- Developed native Android features for USCC Call Guardian using Java, Android SDK, and XML, integrating WebView screens for call-protection and customer flows.
  → Delivered neighborhood spoof protection and maintained a cohesive app experience across native and embedded interfaces.
- Updated Android API integrations and resolved legacy OS compatibility issues across production releases.
  → Maintained support for newer Android versions while addressing platform stability and security-related compatibility.
- Redesigned USCC activation to verify SIM-associated phone numbers with the backend and support devices with multiple SIMs.
  → Replaced manual phone-number entry with a Continue action and simplified onboarding for users.
- Collaborated with an iOS engineer on shared JSON settings data and implemented Google Sign-In and Firebase synchronization with offline-first storage, timestamps, and periodic updates.
  → Allowed users to carry call-protection settings between devices while keeping preferences available locally.
- Investigated and resolved critical background synchronization crashes using Android debugging and Firebase Crashlytics.
  → Eliminated known crash scenarios and contributed to USCC Call Guardian's 99.82% crash-free performance.

- Developed Kotlin-based native Android integrations for Xfinity Call Guard using coroutines, WorkManager, and the React Native bridge, alongside React Native UI features.
  → Supported device-level functionality and delivered text-spam tools, feedback, tooltips, and reusable UI components.
- Diagnosed a production Firebase defect that coincided with backend costs tripling and shipped a hotfix within one week.
  → Corrected the known defect contributing to unexpected backend activity and expense.

TecAce Software

Android Engineer | Bellevue, WA | July 2018 – May 2021

- Developed Java and XML Android applications for Samsung using Android SDK, MVP architecture, and Dagger on an existing shared SDK framework.
  → Contributed to two flagship and three retail-demo applications showcased in Best Buy stores nationwide.
- Built an interactive drawing canvas using Android device and S Pen capabilities for Samsung Galaxy demonstrations.
  → Enabled retail shoppers to try stylus drawing directly on Samsung devices.
- Implemented a music player with animated Android home-screen widgets for Samsung A-series retail demos.
  → Let shoppers explore audio playback and device interactions in-store.
- Adopted Kotlin, Android Jetpack components, and MVVM practices alongside established Java/XML Android development; also worked with React Native.
  → Expanded the range of Android and cross-platform development approaches available to project teams.

SELECTED PROJECTS

JobTracker — Android Task Management

Kotlin · Jetpack Compose · Room · Hilt · MVVM · GraphQL

Task-management application with declarative UI, persistence, dependency injection, and GraphQL integration. github.com/DaCodaHUB/JobTracker
