**Dang Le**
*Android Engineer | Vancouver, WA (Portland Metro Area)*
(360) 521-7667 | dannylpov@gmail.com | Portfolio | LinkedIn

**Professional Summary**

Android Engineer with 8 years of experience owning large-scale native Android applications serving 700K+ users. Expertise in Kotlin, Jetpack Compose, Coroutines, modern Android architecture, offline-first systems, and production reliability. Experienced in technical design, code reviews, cross-functional collaboration, and owning features through production release.

**Technical Skills**

- Android: Kotlin, Android SDK, Jetpack, Jetpack Compose, Navigation, WorkManager, Coroutines, Room, Material 3, Hilt
- Architecture: MVVM, Clean Architecture, Dependency Injection, Offline-First
- Networking: Retrofit, REST APIs, GraphQL, OAuth, JWT, Google Sign-In
- Web / Hybrid: React Native, WebView, HTML, CSS, JavaScript
- Tools: Android Studio, Gradle, Git, Firebase, Crashlytics, Google Play Console, Jenkins, GitLab CI/CD

**Professional Experience**

***Android Engineer***

**Transaction Network Services** – Remote (Seattle, WA) | June 2021 – August 2026

- Owned Android development for USCC Call Guardian (500K+ users) and Xfinity Call Guard (200K+ users), driving technical design, feature delivery, code reviews, releases, and application reliability.
- Improved the cross-device experience by designing and implementing settings synchronization with Google Sign-In and Firebase, preserving user preferences across devices and offline use.
- Expanded call-protection capabilities and app engagement through neighborhood spam blocking and deep linking, giving users more control over unwanted calls and direct access to relevant app experiences.
- Strengthened production reliability by improving background synchronization, resolving critical defects, and adapting to Android platform changes, contributing to a 99.82% Crashlytics crash-free rate.

***Android Engineer***

**TecAce Software** – Hybrid (Bellevue, WA) | July 2018 – May 2021

- Delivered revenue-generating Android and React Native projects for Samsung, contributing to 2 flagship and 3 retail demo applications showcased in Best Buy stores nationwide.
- Built interactive experiences including S Pen canvas drawing, ExoPlayer media playback, and frame-based widget animations to showcase Samsung hardware and platform capabilities.
- Delivered pixel-perfect interfaces for Samsung retail demos, translating design specifications into polished experiences showcasing flagship devices to customers.

**Projects**

***JobTracker*** (GitHub)

- Built an Android task management application using Jetpack Compose, Material 3, Room, Hilt, MVVM, Kotlin, and GraphQL, applying modern Android architecture and offline data patterns.

**Education**

**University of Washington** (Seattle, WA) — B.S. Computer Engineering
